

Lessons from Nature

Using insights from nature to inspire and build a brighter future

“A genuine progression from first principles through to a deeper insight and understanding of closed loop systems”

Teacher participating in a trial

“It has helped me to realize the potential of using nature to solve future problems”

Learner participating in a trial

Applying insights from nature

An exciting and innovative learning experience for a group of students aged 12 to 16 designed to help them to:

- discover powerful ideas to solve the problems of today and create a brighter future
- use insights from nature to critically examine and re-design products and production systems
- develop a range of competencies that will help to properly equip learners for work in the post peak oil economy

Lessons from Nature

Discovering diversity

Understanding closed loop systems

Insights from nature in the introductory module of the programme include:

- Things in nature have multiple benefits
- In nature diversity gives strength
- In nature waste equals food (closed loop systems)
- Nature can be abundant and very effective
- There is huge potential in biomimicry

Visit our website to find out more about the project

Benefits of participating in the Lessons from Nature project:

- a challenging, rewarding, engaging, enjoyable experience designed to support and accelerate future learning
- free learning resources
- “When planned and implemented well, Learning Outside the Classroom contributed significantly to raising standards and improving pupil’s personal, social and emotional development” **OFSTED**. Our intention is to plan to achieve very significant progress for all participants.
